

Package ‘PSGD’

April 25, 2023

Type Package

Title Projected Subset Gradient Descent

Version 1.0.3

Date 2023-04-24

Maintainer Anthony Christidis <anthony.christidis@stat.ubc.ca>

Description Functions to generate ensembles of generalized linear models using a greedy projected subset gradient descent algorithm. The sparsity and diversity tuning parameters are selected by cross-validation.

License GPL (>= 2)

Biarch true

LinkingTo Rcpp, RcppArmadillo

RoxygenNote 7.1.1

Imports Rcpp (>= 1.0.7)

Suggests testthat, mvnfast

NeedsCompilation yes

coef.cv.PSGD *Coefficients for cv.PSGD Object*

Description

coef.cv.PSGD returns the coefficients for a cv.PSGD object.

Usage

```
## S3 method for class 'cv.PSGD'  
coef(object, group_index = NULL, ...)
```

Arguments

object	An object of class cv.PSGD
group_index	Groups included in the ensemble. Default setting includes all the groups.
...	Additional arguments for compatibility.

Value

The coefficients for the cv.PSGD object.

Author(s)

Anthony-Alexander Christidis, <anthony.christidis@stat.ubc.ca>

coef.PSGD

Coefficients for PSGD Object

Description

coef.PSGD returns the coefficients for a PSGD object.

Usage

```
## S3 method for class 'PSGD'
coef(object, group_index = NULL, ...)
```

Arguments

object	An object of class PSGD.
group_index	Groups included in the ensemble. Default setting includes all the groups.
...	Additional arguments for compatibility.

Value

The coefficients for the PSGD object.

mean((y.test - psgd.predictions)^2)/sigma.epsilon^2
```

Description

cv.PSGD performs the CV procedure for a projected subset gradient descent algorithm.

Usage

```
cv.PSGD(  
  x,  
  y,  
  n_models,  
  model_type = c("Linear", "Logistic")[1],  
  include_intercept = TRUE,  
  split_grid,  
  size_grid,  
  max_iter = 100,  
  cycling_iter = 5,  
  n_folds = 5,  
  n_threads = 1  
)
```

Arguments

x	Design matrix.
y	Response vector.
n_models	Number of models into which the variables are split.
model_type	Model type. Must be one of "Linear or Logistic". Default is "Linear".
include_intercept	TRUE or FALSE parameter for the inclusion of an intercept term. Default is TRUE.
split_grid	Grid for number of models that may share a variable.
size_grid	Grid for number of variables that a model may have.
max_iter	Maximum number of iterations in PSGD algorithm.
cycling_iter	Number of random cycling permutations.
n_folds	Number of cross-validation folds. Default is 5
n_threads	Number of threads. Default is 1.

Value

An object of class cv.PSGD

predict.cv.PSGD *Predictions for cv.PSGD Object*

Description

predict.cv.PSGD returns the predictions for a cv.PSGD object.

Usage

```
## S3 method for class 'cv.PSGD'  
predict(object, newx, group_index = group_index, ...)
```

Arguments

object	An object of class cv.PSGD
newx	New data for predictions.
group_index	Groups included in the ensemble. Default setting includes all the groups.
...	Additional arguments for compatibility.

Value

The predictions for the cv.PSGD object.

predict.PSGD

Predictions for PSGD Object

Description

predict.PSGD returns the predictions for a PSGD object.

Usage

```
## S3 method for class 'PSGD'
predict(object, newx, group_index = NULL, ...)
```

Arguments

object	An object of class PSGD
newx	New data for predictions.

group_index Groups included in the ensemble. Default setting includes all the groups.
 ... Additional arguments for compatibility.

Value

The predictions for the PSGD object.

 PSGD

Projected Subset Gradient Descent

Description

PSGD performs a projected subset gradient descent algorithm.

Usage

```

PSGD(
  x,
  y,
  n_models,
  model_type = c("Linear", "Logistic")[1],
  include_intercept = TRUE,
  split,
  size,
  max_iter = 100,
  cycling_iter = 5
)

```

Arguments

x	Design matrix.
y	Response vector.
n_models	Number of models into which the variables are split.
model_type	Model type. Must be one of "Linear or Logistic". Default is "Linear".
include_intercept	TRUE or FALSE parameter for the inclusion of an intercept term. Default is TRUE.
split	Number of models that may share a variable.
size	Number of variables that a model may have.
max_iter	Maximum number of iterations in PSGD algorithm.
cycling_iter	Number of random cycling permutations.

Value

An object of class PSGD
