

Package ‘arkhe’

November 7, 2024

Title Tools for Cleaning Rectangular Data

Version 1.8.0

Maintainer Nicolas Frerebeau <nicolas.frerebeau@u-bordeaux-montaigne.fr>

Description A dependency-free collection of simple functions for cleaning rectangular data. This package allows to detect, count and replace values or discard rows/columns using a predicate function. In addition, it provides tools to check conditions and return informative error messages.

<i>append_column</i>	<i>Add a (Named) Vector as a Column</i>
----------------------	---

Description

Add a (Named) Vector as a Column

Usage

```
append_column(x, ...)  
  
## S4 method for signature 'data.frame'  
append_column(x, column, after = 0, var = ".col")
```

Arguments

<i>x</i>	A data.frame .
<i>...</i>	Currently not used.
<i>column</i>	A (named) vector.
<i>after</i>	A length-one numeric vector specifying a subscript, after which the new column is to be appended.
<i>var</i>	A character string giving the name of the new column.

Details

If *column* is named, names will be matched to the row names of *x*. Only the first match is retained, and elements of *column* without a match are removed. This allows to add as a column a vector whose length is less than the number of rows in *x* (NAs will be inserted).

Value

A [data.frame](#).

Author(s)

N. Frerebeau

Other data preparation tools: [append_rownames\(\)](#), [assign\(\)](#), [compact\(\)](#), [count\(\)](#), [detect\(\)](#), [discard\(\)](#), [get\(\)](#), [keep\(\)](#), [seek\(\)](#)

Examples

```
X <- data.frame(  
  x = 1:5,  
  y = 6:10,  
  row.names = LETTERS[1:5]  
)  
  
Y <- c(D = 44, B = 55, Z = 22)  
  
append_column(X, Y, after = 3)
```

append_rownames

Convert Row Names to an Explicit Column

Description

Convert Row Names to an Explicit Column

Usage

```
append_rownames(x, ...)
```

```
## S4 method for signature 'data.frame'
```

```
append_rownames(x, after = 0, remove = TRUE, var = "rownames")
```

Arguments

x	A data.frame .
...	Currently not used.
after	A length-one numeric vector specifying a subscript, after which the row names are to be appended.
remove	A logical scalar: should the row names be removed?
var	A character string giving the name of name of the new column.

Value

A [data.frame](#).

Author(s)

N. Frerebeau

Examples

```
X <- data.frame(  
  x = 1:5,  
  y = 6:10,  
  z = LETTERS[1:5]  
)  
  
## Assign column to row names  
(Y <- assign_rownames(X, 3))  
  
## Append row names to data.frame  
(Z <- append_rownames(Y))
```

assert_constant

Check Numeric Trend

Description

Check Numeric Trend

Usage

```
assert_constant(x, ...)
```

```
assert_decreasing(x, ...)
```

```
assert_increasing(x, ...)
```

Arguments

`x` A **numeric** object to be checked.
`...` Extra parameters to be passed to internal methods.

Value

Throws an error, if any, and returns `x` invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

`assert_dim`*Check Object Dimensions*

Description

Check Object Dimensions

Usage

```
assert_dim(x, expected)
```

```
assert_nrow(x, expected)
```

```
assert_ncol(x, expected)
```

Arguments

<code>x</code>	An object to be checked.
<code>expected</code>	An appropriate expected value.

Value

Throws an error, if any, and returns `x` invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_empty	<i>Check Object Filling</i>
--------------	-----------------------------

Description

Checks if an object is (not) empty.

Usage

```
assert_empty(x)
```

```
assert_filled(x)
```

Arguments

x An object to be checked.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_infinite	<i>Check Infinite Values</i>
-----------------	------------------------------

Description

Checks if an object contains any infinite (Inf) values.

Usage

```
assert_infinite(x)
```

Arguments

x An object to be checked.

Value

Throws an error, if any, and returns `x` invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric\(\)](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_length	<i>Check Object Length(s)</i>
---------------	-------------------------------

Description

Check Object Length(s)

Usage

```
assert_length(x, expected, allow_empty = empty, empty = FALSE)
```

```
assert_lengths(x, expected)
```

Arguments

<code>x</code>	An object to be checked.
<code>expected</code>	An appropriate expected value.
<code>allow_empty</code>	A logical scalar: should empty object be allowed?
<code>empty</code>	Deprecated.

Value

Throws an error, if any, and returns `x` invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric\(\)](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_lower	<i>Check Numeric Relations</i>
--------------	--------------------------------

Description

Check Numeric Relations

Usage

```
assert_lower(x, y, ...)
```

```
assert_greater(x, y, ...)
```

Arguments

x, y	A numeric object to be checked.
...	Extra parameters to be passed to internal methods.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_missing	<i>Check Missing Values</i>
----------------	-----------------------------

Description

Checks if an object contains any missing (NA, NaN) values.

Usage

```
assert_missing(x)
```

Arguments

x	An object to be checked.
---	--------------------------

Value

Throws an error, if any, and returns `x` invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_names

Check Object Names

Description

Check Object Names

Usage

```
assert_names(x, expected = NULL)
```

```
assert_rownames(x, expected = NULL)
```

```
assert_colnames(x, expected = NULL)
```

Arguments

<code>x</code>	An object to be checked.
<code>expected</code>	An appropriate expected value.

Value

Throws an error, if any, and returns `x` invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_numeric	<i>Check Numeric Values</i>
----------------	-----------------------------

Description

Check Numeric Values

Usage

```
assert_count(x, na.rm = FALSE, ...)  
assert_whole(x, na.rm = FALSE, ...)  
assert_positive(x, na.rm = FALSE, ...)  
assert_negative(x, na.rm = FALSE, ...)  
assert_odd(x, na.rm = FALSE, ...)  
assert_even(x, na.rm = FALSE, ...)
```

Arguments

x	A numeric object to be checked.
na.rm	A logical scalar: should missing values (including NaN) be omitted?
...	Extra parameters to be passed to internal methods.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

`assert_package`*Check the Availability of a Package*

Description

Check the Availability of a Package

Usage

```
assert_package(x, ask = TRUE)
```

```
needs(x, ask = TRUE)
```

Arguments

<code>x</code>	A character vector naming the packages to check.
<code>ask</code>	A logical scalar: should the user be asked to select packages before they are downloaded and installed?

Details

`assert_package()` is designed for use inside other functions in your own package to check for the availability of a suggested package.

If the required packages are not available and R is running interactively, the user will be asked to install the packages.

`needs()` is an alias for `assert_package()`.

Value

Invisibly returns NULL.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_square	<i>Check Matrix</i>
---------------	---------------------

Description

Check Matrix

Usage

```
assert_square(x)
```

```
assert_symmetric(x)
```

Arguments

x A [matrix](#) to be checked.

Value

Throw an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_type\(\)](#), [assert_unique\(\)](#)

assert_type	<i>Check Data Types</i>
-------------	-------------------------

Description

Check Data Types

Usage

```
assert_type(x, expected, allow_empty = TRUE, allow_null = FALSE)
```

```
assert_scalar(x, expected)
```

```
assert_function(x)
```

Arguments

x	An object to be checked.
expected	A character string specifying the expected type. It must be one of "list", "atomic", "vector", "numeric", "integer", "double", "character" or "logical".
allow_empty	A logical scalar: should empty object be allowed?
allow_null	A logical scalar: should NULL object be allowed?

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_unique\(\)](#)

assert_unique

Check Duplicates

Description

Checks if an object contains duplicated elements.

Usage

```
assert_unique(x)
```

Arguments

x	An object to be checked.
---	--------------------------

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other checking methods: [assert_constant\(\)](#), [assert_dim\(\)](#), [assert_empty\(\)](#), [assert_infinite\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_missing\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#)

`assign`*Assign a Specific Row/Column to the Column/Row Names*

Description

Assign a Specific Row/Column to the Column/Row Names

Usage

```
assign_colnames(x, ...)  
  
assign_rownames(x, ...)  
  
## S4 method for signature 'data.frame'  
assign_rownames(x, column, remove = TRUE)  
  
## S4 method for signature 'data.frame'  
assign_colnames(x, row, remove = TRUE)
```

Arguments

<code>x</code>	A data.frame .
<code>...</code>	Currently not used.
<code>column</code>	A length-one numeric vector specifying the column number that is to become the row names.
<code>remove</code>	A logical scalar: should the specified row/column be removed after making it the column/row names?
<code>row</code>	A length-one numeric vector specifying the row number that is to become the column names.

Value

A [data.frame](#).

Author(s)

N. Frerebeau

See Also

Other data preparation tools: [append_column\(\)](#), [append_rownames\(\)](#), [compact\(\)](#), [count\(\)](#), [detect\(\)](#), [discard\(\)](#), [get\(\)](#), [keep\(\)](#), [seek\(\)](#)

Examples

```
X <- data.frame(
  x = 1:5,
  y = 6:10,
  z = LETTERS[1:5]
)

## Assign column to row names
(Y <- assign_rownames(X, 3))

## Append row names to data.frame
(Z <- append_rownames(Y))
```

bootstrap

*Bootstrap Estimation***Description**

Samples randomly from the elements of object with replacement.

Usage

```
bootstrap(object, ...)

## S4 method for signature 'numeric'
bootstrap(object, do, n, ..., f = NULL)
```

Arguments

object	A numeric vector.
...	Extra arguments to be passed to do.
do	A function that takes object as an argument and returns a single numeric value.
n	A non-negative integer giving the number of bootstrap replications.
f	A function that takes a single numeric vector (the result of do) as argument.

Value

If f is NULL (the default), bootstrap() returns a named numeric vector with the following elements:

original The observed value of do applied to object.

mean The bootstrap estimate of mean of do.

bias The bootstrap estimate of bias of do.

error The bootstrap estimate of standard error of do.

If f is a function, bootstrap() returns the result of f applied to the n values of do.

Author(s)

N. Frerebeau

See Also

Other resampling methods: [jackknife\(\)](#)

Examples

```
x <- rnorm(20)

## Bootstrap
bootstrap(x, do = mean, n = 100)

## Estimate the 25th and 95th percentiles
quant <- function(x) { quantile(x, probs = c(0.25, 0.75)) }
bootstrap(x, n = 100, do = mean, f = quant)

## Get the n bootstrap values
bootstrap(x, n = 100, do = mean, f = function(x) { x })

## Jackknife
jackknife(x, do = mean) # Sample mean

## Get the leave-one-out values instead of summary
jackknife(x, do = mean, f = function(x) { x })
```

clean_whitespace	<i>Remove Leading/Trailing Whitespace</i>
------------------	---

Description

Remove Leading/Trailing Whitespace

Usage

```
clean_whitespace(x, ...)
```

```
## S4 method for signature 'data.frame'
clean_whitespace(x, which = c("both", "left", "right"), squish = TRUE)
```

```
## S4 method for signature 'matrix'
clean_whitespace(x, which = c("both", "left", "right"), squish = TRUE)
```

Arguments

<code>x</code>	An R object (should be a matrix or a data.frame).
<code>...</code>	Currently not used.
<code>which</code>	A character string specifying whether to remove both leading and trailing whitespace (default), or only leading ("left") or trailing ("right").
<code>squish</code>	A logical scalar: should all internal whitespace be replaced with a single space?

Author(s)

N. Frerebeau

See Also

[trimws\(\)](#)

Other data cleaning tools: [remove_Inf\(\)](#), [remove_NA\(\)](#), [remove_constant\(\)](#), [remove_empty\(\)](#), [remove_zero\(\)](#), [replace_Inf\(\)](#), [replace_NA\(\)](#), [replace_empty\(\)](#), [replace_zero\(\)](#)

Examples

```
x <- data.frame(
  A = c(" Both ", " Left", "Right "),
  B = 1:3
)

clean_whitespace(x, which = "both")
clean_whitespace(x, which = "left")
clean_whitespace(x, which = "right")
```

compact

Remove Empty Rows/Columns

Description

Removes empty rows/columns in an array-like object.

Usage

```
compact(x, ...)
```

```
compact_cols(x, ...)
```

```
compact_rows(x, ...)
```

```
## S4 method for signature 'ANY'
```

```
compact(x, margin = 1, na.rm = FALSE, verbose = getOption("arkhe.verbose"))
```

```
## S4 method for signature 'ANY'
compact_cols(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))

## S4 method for signature 'ANY'
compact_rows(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

Details

A row/column is empty if it contains only zeros (if of type [numeric](#)) or zero length character strings (if of type [character](#)).

Author(s)

N. Frerebeau

See Also

Other data preparation tools: [append_column\(\)](#), [append_rownames\(\)](#), [assign\(\)](#), [count\(\)](#), [detect\(\)](#), [discard\(\)](#), [get\(\)](#), [keep\(\)](#), [seek\(\)](#)

Examples

```
## Create a data.frame
X <- data.frame(A = 0, B = 1:5, C = 6, D = "", F = letters[1:5])
X

## Remove empty columns
compact(X, margin = 2)
```

concat	<i>Concatenate</i>
--------	--------------------

Description

Concatenates character vectors.

Usage

```
x %+% y
```

Arguments

x, y A [character](#) vector.

Value

A [character](#) vector.

See Also

Other utilities: [null](#)

confidence_binomial	<i>Confidence Interval for Binomial Proportions</i>
---------------------	---

Description

Computes a Wald interval for a proportion at a desired level of significance.

Usage

```
confidence_binomial(object, ...)  
  
## S4 method for signature 'numeric'  
confidence_binomial(  
  object,  
  n,  
  level = 0.95,  
  method = "wald",  
  corrected = FALSE  
)
```

Arguments

object	A numeric vector giving the number of success.
...	Currently not used.
n	A length-one numeric vector giving the number of trials.
level	A length-one numeric vector giving the confidence level. Must be a single number between 0 and 1.
method	A character string specifying the method to be used. Any unambiguous substring can be used.
corrected	A logical scalar: should continuity correction be used? Only used if method is "wald".

Value

A length-two **numeric** vector giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

See Also

Other summary statistics: [confidence_mean\(\)](#), [confidence_multinomial\(\)](#), [interval_credibile\(\)](#), [interval_hdr\(\)](#)

Examples

```
## Confidence interval for a mean
x <- seq(from = -4, to = 4, by = 0.01)
y <- dnorm(x)

confidence_mean(y, type = "student")
confidence_mean(y, type = "normal")

## Confidence interval for a propotion
confidence_binomial(118, n = 236)

x <- c(35, 74, 22, 69)
confidence_multinomial(x)
```

confidence_mean

Confidence Interval for a Mean

Description

Computes a confidence interval for a mean at a desired level of significance.

Usage

```
confidence_mean(object, ...)  
  
## S4 method for signature 'numeric'  
confidence_mean(object, level = 0.95, type = c("student", "normal"))
```

Arguments

object	A numeric vector.
...	Currently not used.
level	A length-one numeric vector giving the confidence level. Must be a single number between 0 and 1.
type	A character string giving the type of confidence interval to be returned. It must be one "student" (the default) or "normal". Any unambiguous substring can be given.

Value

A length-two [numeric](#) vector giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

See Also

Other summary statistics: [confidence_binomial\(\)](#), [confidence_multinomial\(\)](#), [interval_credible\(\)](#), [interval_hdr\(\)](#)

Examples

```
## Confidence interval for a mean  
x <- seq(from = -4, to = 4, by = 0.01)  
y <- dnorm(x)  
  
confidence_mean(y, type = "student")  
confidence_mean(y, type = "normal")  
  
## Confidence interval for a propotion  
confidence_binomial(118, n = 236)  
  
x <- c(35, 74, 22, 69)  
confidence_multinomial(x)
```

`confidence_multinomial`*Confidence Interval for Multinomial Proportions*

Description

Computes a Wald interval for a proportion at a desired level of significance.

Usage

```
confidence_multinomial(object, ...)  
  
## S4 method for signature 'numeric'  
confidence_multinomial(  
  object,  
  level = 0.95,  
  method = "wald",  
  corrected = FALSE  
)
```

Arguments

<code>object</code>	A numeric vector of positive integers giving the number of occurrences of each class.
<code>...</code>	Currently not used.
<code>level</code>	A length-one numeric vector giving the confidence level. Must be a single number between 0 and 1.
<code>method</code>	A character string specifying the method to be used. Any unambiguous substring can be used.
<code>corrected</code>	A logical scalar: should continuity correction be used? Only used if method is "wald".

Value

A two column [numeric](#) matrix giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

Other summary statistics: [confidence_binomial\(\)](#), [confidence_mean\(\)](#), [interval_credibile\(\)](#), [interval_hdr\(\)](#)

Examples

```
## Confidence interval for a mean
x <- seq(from = -4, to = 4, by = 0.01)
y <- dnorm(x)

confidence_mean(y, type = "student")
confidence_mean(y, type = "normal")

## Confidence interval for a propotion
confidence_binomial(118, n = 236)

x <- c(35, 74, 22, 69)
confidence_multinomial(x)
```

count

*Count Values Using a Predicate***Description**

Counts values by rows/columns using a predicate function.

Usage

```
count(x, ...)

## S4 method for signature 'data.frame'
count(x, f, margin = 1, negate = FALSE, na.rm = FALSE, ...)

## S4 method for signature 'matrix'
count(x, f, margin = 1, negate = FALSE, na.rm = FALSE, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to f.
f	A predicate function .
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?

Value

A [numeric](#) vector.

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Count missing values in rows
count(X, f = is.na, margin = 1)
## Count non-missing values in columns
count(X, f = is.na, margin = 2, negate = TRUE)
```

describe

Data Description

Description

Describes an object.

Usage

```
describe(x, ...)
```

S4 method for signature 'ANY'

```
describe(x)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.

Value

`describe()` is called for its side-effects. Invisibly returns `x`.

Author(s)

N. Frerebeau

See Also

Other data summaries: [sparsity\(\)](#)

Examples

```
## Create a data matrix
X <- matrix(sample(0:9, 15, TRUE), nrow = 3, ncol = 5)

## Add NA
k <- sample(1:15, 3, FALSE)
X[k] <- NA

## Sparsity
sparsity(X)

## Quick description
describe(X)
```

detect

Find Rows/Columns Using a Predicate

Description

Finds rows/columns in an array-like object using a predicate function.

Usage

```
detect(x, ...)

## S4 method for signature 'ANY'
detect(x, f, margin = 1, negate = FALSE, all = FALSE, na.rm = FALSE, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to f.
f	A predicate function .
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?

Value

A [logical](#) vector.

Author(s)

N. Frerebeau

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Find row with NA
detect(X, f = is.na, margin = 1)
## Find column without any NA
detect(X, f = is.na, margin = 2, negate = TRUE, all = TRUE)
```

discard

Remove Rows/Columns Using a Predicate

Description

Removes rows/columns in an array-like object using a predicate function.

Usage

```
discard(x, ...)

discard_cols(x, ...)

discard_rows(x, ...)

## S4 method for signature 'ANY'
discard(
  x,
  f,
  margin = 1,
  negate = FALSE,
```

```

    all = FALSE,
    na.rm = FALSE,
    verbose = getOption("arkhe.verbose"),
    ...
)

## S4 method for signature 'ANY'
discard_rows(
  x,
  f,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
)

## S4 method for signature 'ANY'
discard_cols(
  x,
  f,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
)

```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to f.
f	A predicate function .
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Remove row with any NA
discard(X, f = is.na, margin = 1, all = FALSE)
## Remove column with any NA
discard(X, f = is.na, margin = 2, all = FALSE)
```

get

Get Rows/Columns by Name

Description

Returns rows/columns selected by name in an array-like object.

Usage

```
get_columns(x, ...)

get_rows(x, ...)

## S4 method for signature 'ANY'
get_columns(x, select = NULL, names = NULL, ...)

## S4 method for signature 'ANY'
get_rows(x, select = NULL, names = NULL, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to select.
select	A function to be applied to the row/column names (e.g. startsWith()) that returns an integer or logical vector.
names	A character vector of row/column names to look for. Only used if select is NULL.

Value

An object of the same sort as `x`.

Other data preparation tools: [append_column\(\)](#), [append_rownames\(\)](#), [assign\(\)](#), [compact\(\)](#), [count\(\)](#), [detect\(\)](#), [discard\(\)](#), [keep\(\)](#), [seek\(\)](#)

Examples

```
## Seek columns
seek_columns(iris, select = startsWith, prefix = "Petal")
seek_columns(iris, names = c("Petal.Length", "Petal.Width"))

## Get columns
x <- get_columns(iris, select = startsWith, prefix = "Petal")
head(x)

x <- get_columns(iris, names = c("Petal.Length", "Petal.Width"))
head(x)
```

interval_credible *Bayesian Credible Interval*

Description

Computes the shortest credible interval within which an unobserved parameter value falls with a particular probability.

Usage

```
interval_credible(x, ...)

## S4 method for signature 'numeric'
interval_credible(x, level = 0.95)
```

Arguments

<code>x</code>	A numeric vector.
<code>...</code>	Currently not used.
<code>level</code>	A length-one numeric vector giving the confidence level.

Value

A three-columns numeric **matrix** giving the lower and upper boundaries of the credible interval and associated probability.

Author(s)

N. Frerebeau

See Also

Other summary statistics: [confidence_binomial\(\)](#), [confidence_mean\(\)](#), [confidence_multinomial\(\)](#), [interval_hdr\(\)](#)

Examples

```
## HDR of the Old Faithful eruption times
interval_hdr(faithful$eruptions)
```

interval_hdr	<i>Highest Density Regions</i>
--------------	--------------------------------

Description

Highest Density Regions

Usage

```
interval_hdr(x, y, ...)

## S4 method for signature 'numeric,numeric'
interval_hdr(x, y, level = 0.954)

## S4 method for signature 'numeric,missing'
interval_hdr(x, level = 0.954, ...)
```

Arguments

x	A numeric vector giving the coordinates of the points where the density is estimated.
y	A numeric vector giving the estimated density values. If y is missing and x is a numeric vector, density estimates will be computed from x.
...	Further arguments to be passed to stats::density() .
level	A length-one numeric vector giving the confidence level.

Value

A three-columns numeric **matrix** giving the lower and upper boundaries of the HPD interval and associated probabilities.

is_scalar

Scalar Type Predicates

Description

Scalar Type Predicates

Usage

```
is_scalar_list(x)
is_scalar_atomic(x)
is_scalar_vector(x)
is_scalar_numeric(x)
is_scalar_integer(x)
is_scalar_double(x)
is_scalar_character(x)
is_scalar_logical(x)
```

Arguments

x An object to be tested.

Value

A [logical](#) scalar.

See Also

Other predicates: [predicate-attributes](#), [predicate-data](#), [predicate-matrix](#), [predicate-names](#), [predicate-numeric](#), [predicate-trend](#), [predicate-type](#)

 jackknife

Jackknife Estimation

Description

Jackknife Estimation

Usage

```
jackknife(object, ...)
```

```
## S4 method for signature 'numeric'
jackknife(object, do, ..., f = NULL)
```

Arguments

object	A numeric vector.
...	Extra arguments to be passed to do.
do	A function that takes object as an argument and returns a single numeric value.
f	A function that takes a single numeric vector (the leave-one-out values of do) as argument.

Value

If f is NULL (the default), jackknife() returns a named numeric vector with the following elements:

original The observed value of do applied to object.

mean The jackknife estimate of mean of do.

bias The jackknife estimate of bias of do.

error The jackknife estimate of standard error of do.

If f is a function, jackknife() returns the result of f applied to the leave-one-out values of do.

Author(s)

N. Frerebeau

See Also

Other resampling methods: [bootstrap\(\)](#)

Examples

```
x <- rnorm(20)

## Bootstrap
bootstrap(x, do = mean, n = 100)

## Estimate the 25th and 95th percentiles
quant <- function(x) { quantile(x, probs = c(0.25, 0.75)) }
bootstrap(x, n = 100, do = mean, f = quant)

## Get the n bootstrap values
bootstrap(x, n = 100, do = mean, f = function(x) { x })

## Jackknife
jackknife(x, do = mean) # Sample mean

## Get the leave-one-out values instead of summary
jackknife(x, do = mean, f = function(x) { x })
```

keep

Keep Rows/Columns Using a Predicate

Description

Keeps rows/columns in an array-like object using a predicate function.

Usage

```
keep(x, ...)

keep_cols(x, ...)

keep_rows(x, ...)

## S4 method for signature 'ANY'
keep(
  x,
  f,
  margin = 1,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
```

```

)

## S4 method for signature 'ANY'
keep_rows(
  x,
  f,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
)

## S4 method for signature 'ANY'
keep_cols(
  x,
  f,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
)

```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to f.
f	A predicate function .
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Keep row without any NA
keep(X, f = is.na, margin = 1, negate = TRUE, all = TRUE)
## Keep row without any NA
keep(X, f = is.na, margin = 2, negate = TRUE, all = TRUE)
```

math_gcd

Greatest Common Divisor

Description

Computes the greatest common divisor (GCD) of two integer using the Euclidean algorithm.

Usage

```
math_gcd(x, y)

## S4 method for signature 'numeric,numeric'
math_gcd(x, y)
```

Arguments

x, y A [numeric](#) vector.

Value

A [numeric](#) vector.

Author(s)

N. Frerebeau

See Also

Other mathematic functions: [math_lcm\(\)](#)

math_lcm	<i>Least Common Multiple</i>
----------	------------------------------

Description

Computes the lowest common multiple of the denominators of a set of fractions.

Usage

```
math_lcm(x, y)

## S4 method for signature 'numeric,numeric'
math_lcm(x, y)
```

Arguments

x, y A [numeric](#) vector.

Value

A [numeric](#) vector.

Author(s)

N. Frerebeau

See Also

Other mathematic functions: [math_gcd\(\)](#)

null	<i>Default value for NULL</i>
------	-------------------------------

Description

Replaces NULL with a default value.

Usage

```
x %||% y
```

Arguments

x, y An object.

Value

If `x` is `NULL`, returns `y`; otherwise returns `x`.

See Also

Other utilities: [concat](#)

predicate-attributes *Attributes Predicates*

Description

- `has_length()` checks how long is an object.
- `is_empty()` checks is an object is empty (any zero-length dimensions).

Usage

```
has_length(x, n = NULL)
```

```
is_empty(x)
```

Arguments

- | | |
|----------------|---|
| <code>x</code> | A vector to be tested. |
| <code>n</code> | A length-one numeric vector specifying the length to test <code>x</code> with. If <code>NULL</code> , returns <code>TRUE</code> if <code>x</code> has length greater than zero, and <code>FALSE</code> otherwise. |

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-data](#), [predicate-matrix](#), [predicate-names](#), [predicate-numeric](#), [predicate-trend](#), [predicate-type](#)

predicate-data *Utility Predicates*

Description

- `has_missing()` and `has_infinite()` check if an object contains missing or infinite values.
- `has_duplicates()` checks if an object has duplicated elements.

Usage

```
has_missing(x)
```

```
has_infinite(x)
```

```
has_duplicates(x)
```

```
is_unique(x, tolerance = sqrt(.Machine$double.eps), na.rm = FALSE)
```

Arguments

`x` A [vector](#) to be tested.

`tolerance` A [numeric](#) scalar giving the tolerance to check within (for numeric vector).

`na.rm` A [logical](#) scalar: should missing values (including NaN) be omitted?

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-attributes](#), [predicate-matrix](#), [predicate-names](#), [predicate-numeric](#), [predicate-trend](#), [predicate-type](#)

predicate-matrix *Matrix Predicates*

Description

- `is_square()` checks if a matrix is square.
- `is_symmetric()` checks if a matrix is symmetric.

Usage

```
is_square(x)
```

```
is_symmetric(x)
```

Arguments

x A [matrix](#) to be tested.

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-attributes](#), [predicate-data](#), [predicate-names](#), [predicate-numeric](#), [predicate-trend](#), [predicate-type](#)

predicate-names	<i>Names Predicates</i>
-----------------	-------------------------

Description

Checks if an object is named.

Usage

```
has_names(x, names = NULL)
```

```
has_rownames(x, names = NULL)
```

```
has_colnames(x, names = NULL)
```

Arguments

x A [vector](#) to be tested.

names A [character](#) vector specifying the names to test x with. If NULL, returns TRUE if x has names, and FALSE otherwise.

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-attributes](#), [predicate-data](#), [predicate-matrix](#), [predicate-numeric](#), [predicate-trend](#), [predicate-type](#)

predicate-numeric *Numeric Predicates*

Description

Check numeric objects:

- `is_zero()` checks if an object contains only zeros.
- `is_odd()` and `is_even()` check if a number is odd or even, respectively.
- `is_positive()` and `is_negative` check if an object contains only (strictly) positive or negative numbers.
- `is_whole()` checks if an object only contains whole numbers.

Usage

```
is_zero(x, tolerance = sqrt(.Machine$double.eps), ...)
```

```
is_odd(x, ...)
```

```
is_even(x, ...)
```

```
is_positive(x, strict = FALSE, ...)
```

```
is_negative(x, strict = FALSE, ...)
```

```
is_whole(x, tolerance = sqrt(.Machine$double.eps), ...)
```

Arguments

<code>x</code>	A numeric object to be tested.
<code>tolerance</code>	A numeric scalar giving the tolerance to check within.
<code>...</code>	Currently not used.
<code>strict</code>	A logical scalar: should strict inequality be used?

Value

A [logical](#) vector.

See Also

Other predicates: [is_scalar](#), [predicate-attributes](#), [predicate-data](#), [predicate-matrix](#), [predicate-names](#), [predicate-trend](#), [predicate-type](#)

Description

Check numeric objects:

- `is_constant()` checks for equality among all elements of a vector.
- `is_increasing()` and `is_decreasing()` check if a sequence of numbers is monotonically increasing or decreasing, respectively.

Usage

```
is_constant(x, tolerance = sqrt(.Machine$double.eps), na.rm = FALSE)
```

```
is_increasing(x, na.rm = FALSE)
```

```
is_decreasing(x, na.rm = FALSE)
```

```
is_greater(x, y, strict = FALSE, na.rm = FALSE)
```

```
is_lower(x, y, strict = FALSE, na.rm = FALSE)
```

Arguments

<code>x, y</code>	A numeric object to be tested.
<code>tolerance</code>	A numeric scalar giving the tolerance to check within.
<code>na.rm</code>	A logical scalar: should missing values (including NaN) be omitted?
<code>strict</code>	A logical scalar: should strict inequality be used?

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-attributes](#), [predicate-data](#), [predicate-matrix](#), [predicate-names](#), [predicate-numeric](#), [predicate-type](#)

predicate-type	<i>Type Predicates</i>
----------------	------------------------

Description

Type Predicates

Usage

`is_list(x)`

`is_atomic(x)`

`is_vector(x)`

`is_numeric(x)`

`is_integer(x)`

`is_double(x)`

`is_character(x)`

`is_logical(x)`

`is_error(x)`

`is_warning(x)`

`is_message(x)`

Arguments

`x` An object to be tested.

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-attributes](#), [predicate-data](#), [predicate-matrix](#), [predicate-names](#), [predicate-numeric](#), [predicate-trend](#)

remove_constant *Remove Constant Columns*

Description

Remove Constant Columns

Usage

```
remove_constant(x, ...)  
  
## S4 method for signature 'ANY'  
remove_constant(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

Author(s)

N. Frerebeau

See Also

Other data cleaning tools: [clean_whitespace\(\)](#), [remove_Inf\(\)](#), [remove_NA\(\)](#), [remove_empty\(\)](#), [remove_zero\(\)](#), [replace_Inf\(\)](#), [replace_NA\(\)](#), [replace_empty\(\)](#), [replace_zero\(\)](#)

Examples

```
## Create a data.frame  
X <- data.frame(A = 1, B = 1:3)  
X  
  
remove_constant(X)  
  
## Add NA  
X[1, 1] <- NA  
remove_constant(X)  
remove_constant(X, na.rm = TRUE)
```

remove_empty	<i>Remove Rows/Columns with Empty String</i>
--------------	--

Description

Removes rows/columns that contain empty strings.

Usage

```
remove_empty(x, ...)
```

```
## S4 method for signature 'ANY'
```

```
remove_empty(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

Author(s)

N. Frerebeau

Other data cleaning tools: [clean_whitespace\(\)](#), [remove_Inf\(\)](#), [remove_NA\(\)](#), [remove_constant\(\)](#), [remove_zero\(\)](#), [replace_Inf\(\)](#), [replace_NA\(\)](#), [replace_empty\(\)](#), [replace_zero\(\)](#)

Examples

```
## Create a data matrix
X <- matrix(sample(LETTERS, 25, TRUE), nrow = 5, ncol = 5)

## Add empty string
k <- sample(1:25, 3, FALSE)
X[k] <- ""
X

## Remove rows with empty strings
remove_empty(X, margin = 1)
```

```
## Replace empty strings
replace_empty(X, value = "XXX")
```

remove_Inf	<i>Remove Rows/Columns with Infinite Values</i>
------------	---

Description

Removes rows/columns that contain [infinite values](#).

Usage

```
remove_Inf(x, ...)

## S4 method for signature 'ANY'
remove_Inf(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

Author(s)

N. Frerebeau

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add Inf
k <- sample(1:25, 3, FALSE)
X[k] <- Inf
X
```

```
## Remove rows with Inf
remove_Inf(X, margin = 1)

## Replace Inf with zeros
replace_Inf(X, value = 0)
```

remove_NA

Remove Rows/Columns with Missing Values

Description

Removes rows/columns that contain [missing values](#).

Usage

```
remove_NA(x, ...)

## S4 method for signature 'ANY'
remove_NA(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

Other data cleaning tools: [clean_whitespace\(\)](#), [remove_Inf\(\)](#), [remove_constant\(\)](#), [remove_empty\(\)](#), [remove_zero\(\)](#), [replace_Inf\(\)](#), [replace_NA\(\)](#), [replace_empty\(\)](#), [replace_zero\(\)](#)

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Remove rows with NA
remove_NA(X, margin = 1)

## Replace NA with zeros
replace_NA(X, value = 0)
```

remove_zero

Remove Rows/Columns with Zeros

Description

Removes rows/columns that contain zeros.

Usage

```
remove_zero(x, ...)

## S4 method for signature 'ANY'
remove_zero(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add zero
k <- sample(1:25, 3, FALSE)
X[k] <- 0
X

## Remove rows with zero
remove_zero(X, margin = 1)

## Replace zero
replace_zero(X, value = 1)
```

replace_empty	<i>Replace Empty String</i>
---------------	-----------------------------

Description

Replaces empty strings.

Usage

```
replace_empty(x, ...)
```

S4 method for signature 'matrix'
replace_empty(x, value)

S4 method for signature 'data.frame'
replace_empty(x, value)

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
value	A possible replacement value.

Author(s)

N. Frerebeau

Examples

```
## Create a data matrix
X <- matrix(sample(LETTERS, 25, TRUE), nrow = 5, ncol = 5)

## Add empty string
k <- sample(1:25, 3, FALSE)
X[k] <- ""
X

## Remove rows with empty strings
remove_empty(X, margin = 1)

## Replace empty strings
replace_empty(X, value = "XXX")
```

replace_Inf	<i>Replace Infinite Values</i>
-------------	--------------------------------

Description

Replaces [infinite values](#) values.

Usage

```
replace_Inf(x, ...)
```

S4 method for signature 'matrix'

```
replace_Inf(x, value = 0)
```

S4 method for signature 'data.frame'

```
replace_Inf(x, value = 0)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
value	A possible replacement value.

Author(s)

N. Frerebeau

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add Inf
k <- sample(1:25, 3, FALSE)
X[k] <- Inf
X

## Remove rows with Inf
remove_Inf(X, margin = 1)

## Replace Inf with zeros
replace_Inf(X, value = 0)
```

replace_NA	<i>Replace Missing Values</i>
------------	-------------------------------

Description

Replaces [missing values](#) values.

Usage

```
replace_NA(x, ...)
```

S4 method for signature 'matrix'

```
replace_NA(x, value = 0)
```

S4 method for signature 'data.frame'

```
replace_NA(x, value = 0)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
value	A possible replacement value.

k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Remove rows with NA
remove_NA(X, margin = 1)

## Replace NA with zeros
replace_NA(X, value = 0)
```

replace_zero

Replace Zeros

Description

Replaces zeros.

Usage

```
replace_zero(x, ...)
```

S4 method for signature 'matrix'
replace_zero(x, value)

S4 method for signature 'data.frame'
replace_zero(x, value)

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
value	A possible replacement value.

X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add zero
k <- sample(1:25, 3, FALSE)
X[k] <- 0
X

## Remove rows with zero
remove_zero(X, margin = 1)

## Replace zero
replace_zero(X, value = 1)
```

scale_midpoint	<i>Rescale Continuous Vector (minimum, midpoint, maximum)</i>
----------------	---

Description

Rescales continuous vector to have specified minimum, midpoint and maximum.

Usage

```
scale_midpoint(x, to = c(0, 1), from = range(x, finite = TRUE), midpoint = 0)
```

Arguments

x	A numeric vector.
to	A length-two numeric vector specifying the output range.
from	A length-two numeric vector specifying the input range.
midpoint	A length-one numeric vector specifying the mid-point of input range.

Value

A **numeric** vector.

Note

For internal use only.

See Also

Other scales: [scale_range\(\)](#)

scale_range	<i>Rescale Continuous Vector (minimum, maximum)</i>
-------------	---

Description

Rescales continuous vector to have specified minimum and maximum.

Usage

```
scale_range(x, to = c(0, 1), from = range(x, finite = TRUE))
```

Arguments

x	A numeric vector.
to	A length-two numeric vector specifying the output range.
from	A length-two numeric vector specifying the input range.

Value

A [numeric](#) vector.

Note

For internal use only.

See Also

Other scales: [scale_midpoint\(\)](#)

seek	<i>Search Rows/Columns by Name</i>
------	------------------------------------

Description

Searches rows/columns by name in an array-like object.

Usage

```
seek_columns(x, ...)
```

```
seek_rows(x, ...)
```

```
## S4 method for signature 'data.frame'
seek_rows(x, select = NULL, names = NULL, ...)
```

```
## S4 method for signature 'matrix'
seek_rows(x, select = NULL, names = NULL, ...)

## S4 method for signature 'data.frame'
seek_columns(x, select = NULL, names = NULL, ...)

## S4 method for signature 'matrix'
seek_columns(x, select = NULL, names = NULL, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to <code>select</code> .
select	A function to be applied to the row/column names (e.g. startsWith()) that returns an integer or logical vector.
names	A character vector of row/column names to look for. Only used if <code>select</code> is <code>NULL</code> .

Value

An [integer](#) vector or `NULL` (if `x` does not have row/column names).

Author(s)

N. Frerebeau

Examples

```
## Seek columns
seek_columns(iris, select = startsWith, prefix = "Petal")
seek_columns(iris, names = c("Petal.Length", "Petal.Width"))

## Get columns
x <- get_columns(iris, select = startsWith, prefix = "Petal")
head(x)

x <- get_columns(iris, names = c("Petal.Length", "Petal.Width"))
head(x)
```

`sparsity`*Sparsity*

Description

Computes data sparsity (proportion of zeros).

Usage

```
sparsity(x, ...)  
  
## S4 method for signature 'matrix'  
sparsity(x, count = FALSE)  
  
## S4 method for signature 'data.frame'  
sparsity(x, count = FALSE)
```

Arguments

<code>x</code>	An R object (should be a matrix or a data.frame).
<code>...</code>	Currently not used.
<code>count</code>	A logical scalar: should a count be returned instead of a proportion?

Details

If `x` is a `data.frame`, `sparsity` is computed on numeric variables only.

Value

A length-one [numeric](#) vector.

Other data summaries: [describe\(\)](#)

Examples

```
## Create a data matrix  
X <- matrix(sample(0:9, 15, TRUE), nrow = 3, ncol = 5)  
  
## Add NA  
k <- sample(1:15, 3, FALSE)  
X[k] <- NA
```

```
## Sparsity
sparsity(X)

## Quick description
describe(X)
```

validate

Validate a Condition

Description

Validate a Condition

Usage

```
validate(expr)
```

Arguments

expr An object to be evaluated.

Value

Returns NULL on success, otherwise returns the error as a string.
